

UHP PROJECTS, INC.

Ultra High Pressure Projects

Introducing!

The Revolutionary JETTRAC™ Multi-Crawler Liner & Coatings Removal System

UHP Projects, Inc. has proven that Ultra High Pressure waterjetting surface preparation works. For the past 8 years we have been the leader in bringing this technology to industry. We are proud to introduce the next step in automated surface preparation technology.

ADVANTAGES OF THE MULTI-CRAWLER SYSTEM

- ✓ Disposal cost are reduced by approximately 85%
- ✓ Smaller equipment footprint
- ✓ Less on-site equipment
- ✓ Other tradework performed simultaneously
- ✓ Painting can proceed faster
- ✓ Faster project turnaround times due to increased removal rates
- ✓ Pneumatic or electrically powered remotely operated automated equipment

All UHP equipment is located outside the tank

The innovative and revolutionary JETTRAC™ MULTI-CRAWLER SYSTEM allows us to utilize multiple automated robotic crawlers in conjunction with a powerful vacuum unit and 40,000 PSI water to perform liner and coatings removal safely and efficiently. All coatings and water are vacuumed and containerized as they are being removed, leaving the surface clean and dry, ready for re-coating.

Ultra-high pressure water cleans deep into the substrate removing contamination, leaving the surface and substrate virtually contaminant free. This ensures longer coating life even in difficult environments.

When using the multi-crawler system, project turnaround times will be decreased, waste streams will be reduced by approximately 85%, coating life will be extended due to removal of contaminants, and other maintenance task can be performed simultaneously. These advantages add up to a direct savings in maintenance cost and help to address the ever growing concern of environmental stewardship.

SPECIALIZING IN TANK BOTTOM LINERS AND EXTERNAL ROOF COATINGS
