

# UHP PROJECTS, INC.

## INDUSTRIAL COATING SERVICES

**UHP Projects, Inc** provides an efficient and environmentally friendly alternative to abrasive blasting. We use 40,000 psi waterjetting combined with automated technology and a powerful vacuum system to perform coatings removal, liner removal, and concrete renovations. In addition, UHP Projects, Inc also specializes in lead paint abatement projects, and Hi-Performance coating application services. UHP is one of the leading innovators in the waterjetting business designing and creating in-house new types of equipment geared towards any and all projects.

Our experience and proven leadership in the ultra high pressure waterjetting industry allows us to bring the following advantages to your project:

- Over 28,000,000 ft<sup>2</sup> of surface area cleaned and re-coated worldwide using UHP waterjetting
- Disposal cost are reduced by an average of 85%
- Turnkey services including surface preparation, application of thin and thick film coating systems, water filtration and containment, abrasive blasting
- Faster project turnaround times due to increased removal rates and other maintenance tasks being performed simultaneously
- Trained Project Managers on every project providing maintenance, procedural, and planning expertise
- Lead and TBT Abatement qualified personnel “Green” dedicated

**Lead Paint Abatement** - UHP waterjetting captures lead particles in water droplets virtually eliminating

### **Storage Tanks, Pipeline, Power Generation, Chemical, and Waste Facilities - The JetTrac™ System**

is designed to remove thin and thick film coatings from tank shells, roofs, and floors and leave the surface clean and dry ready for re-coating. As 40,000 psi water is used to remove the coatings, a powerful vacuum unit transfers the coatings and water to a collection point where they are separated. The coating is then containerized and effluent water is tested for disposal. Coatings on transmission pipelines, clarifiers, secondary containment, and various other types of surfaces can easily be removed as well and new coatings reapplied.

*Ask About The JET TRAC™ HOIST-CARRIER SYSTEM*

**Piping and Process equipment** - Since UHP waterjetting creates no dust, containment requirements are significantly reduced. Process equipment can remain in service and pipe runs can be cleaned without a “hot work” permit.

airborne contamination. The water and paint chips are easily captured using vacuum assisted equipment or ground containment. The water is then filtered to a non-hazardous level for disposal. Since you only dispose of the actual coating being removed and the added advantage of no spent abrasives to clean up or dispose of, your overall disposal costs are greatly reduced.

**Company qualifications:**

- **Referenced in SSPC SP-12 and NACE 5 written standards for waterjetting**
- **Acknowledged in SSPC SP-12 and NACE VIS4I Visual Standards**
- **QP-1 Contractor**
- **ISNetworld Verified**
- **Lead certified contractor**
- **NAVSEA/NACE Certified coating inspectors**
- **[HUBZone](#)**

***“ANYONE CAN SUPPLY THE EQUIPMENT - IT'S THE SERVICE THAT COUNTS”***
